

1) Download the latest Ubuntu Desktop ISO and create a bootable USB using Rufus or Balena Etcher.

- Download the Ubuntu Desktop ISO.
- Connect an 8 GB or larger USB drive.
- Open Rufus or Balena Etcher and select the ISO.
- Select the USB drive and start the process.
- Wait for completion and safely eject the USB.

Requirement	Details
OS	Ubuntu Desktop
USB	8 GB or larger
Tool	Rufus / Balena Etcher

2) Install Ubuntu Desktop on a virtual machine using VirtualBox or VMware Player and show the Ubuntu desktop after installation.

- Create a new virtual machine.
- Select the Ubuntu ISO.
- Allocate RAM, CPU and virtual disk space.
- Start the VM and complete installation.
- Restart and log in to Ubuntu.
- Verify the Ubuntu Desktop.

Screenshot: Insert the actual Ubuntu Desktop VM screenshot.

3) During installation create user cyberstudent with a strong password of at least 8 characters containing letters, numbers and symbols.

User Account Details:

Field	Details
Username	cyberstudent
Password	8+ characters
Password	Letters + Numbers + Symbols

4) After installing Ubuntu, run `uname -a` and save the output to `os-info.txt`.

Commands:

```
uname -a
```

```
uname -a > os-info.txt
```

```
cat os-info.txt
```

Screenshot: Insert the actual terminal screenshot showing the output.
